

NEWS RELEASE

Big Beam for Eggleston Brothers

Marchington based Hayes Engineering Ltd have designed, manufactured and installed a 17 metre beam weighing 7 tonnes into an existing building for Eggleston Brothers Ltd in Derby.

The project which has recently been undertaken required careful coordination on site. It involved extensions at each end of the existing building plus crane rail beams for the steel stockholding company. Kevin Walker, Director of Hayes said " This was a tricky project due to the size of the beam we were installing into a working site. From the manufacture through to the installation the handling of such a large beam has been a challenge, but overall the project was successfully completed to the clients programme."

Hayes Engineering Ltd work throughout the UK and are an ISO 9001-2000 registered company. They employ a highly skilled and trained installation team who work closely with

customers to ensure that tight programmes are met. All installation is completed in accordance with the latest Health & Safety regulations and site staff are CSCS qualified.
